

LOCATION: ST-1-541

HYDRAULIC CONDITIONS: Apparent confined; alluvium

PERTINENT OBSERVATIONS: Drilled to 410'. No water observed while drilling and no water in borehole after overnight recovery. Formation water produced when drilling between 460' and 485'. Measured water level at 431.52' G.S. after drilling to 585', blowing hole for one hour, and allowing to recover overnight.
